SKILLS

React, TypeScript, Next.js, Node.js, GraphQL | Redux Sagas, CSS/SCSS, Jest, Playwright, Auth0, Jenkins, Harness

PROFESSIONAL EXPERIENCE

Wells Fargo | Software Engineer (Contract) | San Leandro

2025 - Present

- Architected memory optimization solution for ATM check image processing, reducing per-session memory usage from 100+ MB to 7MB by migrating from base64 encoding to blob-based storage, improving application performance and reliability
- Ensured accessibility compliance across ATM features by integrating keypad navigation, speech string frameworks, and refactored text size management utility to meet banking accessibility standards
- Led React performance optimization efforts by refactoring useEffect hooks and implementing useMemo/Redux selectors, eliminating unnecessary re-renders in mission-critical 24/7 banking application
- Pioneered Playwright integration for end-to-end testing alongside Jest unit testing framework, leveraging AI-assisted development to accelerate test generation and improve deployment confidence for ATM software releases
- Integrated React frontend with ATM hardware services via RESTful APIs, managing keypad control, error handling, and real-time transaction state management in a constrained external service environment
- Implemented customer behavior analytics system using Splunk and AppDynamics, instrumenting screen tracking and telemetry data to monitor application health and user experience across ATM network
- Served as primary CSS expert and mentor for Java engineers transitioning to React, establishing modern layout patterns using Flexbox and component styling standards

Peloton Interactive | Software Engineer | Remote (New York, NY)

2022 - 2024

- As the sole frontend engineer on Peloton's authentication platform, owned the full UI layer for Auth0-based social account linking across web and mobile — a system now used by 2.3M+ users
- Designed and implemented critical auth error handling and redirect flows in Next.js, ensuring a seamless recovery experience for users across edge cases in a zero-tolerance, always-on authentication system
- Partnered directly with backend Auth0 engineers to define API contracts and deliver a cohesive cross-platform auth experience with no dedicated frontend support structure

PayPal | Software Engineer II | San Jose, CA

2020 - 2022

- Launched cross-platform PayPal Shopping Hub using React, TypeScript, Node.js, and GraphQL, delivering commerce experiences for millions of active shoppers across web and mobile
- Built CMS-driven partner deal components and carousels with GraphQL, enabling configurable storefronts across multiple partner integrations
- Implemented A/B testing and user behavior tracking via beacons to optimize shopping experience and conversion
- Maintained internal React Server Side Rendering implementation for improved SEO presence

RaiseMe | Software Engineer | San Francisco, CA

2019 - 2020

- Implemented series of B2B marketing pages using HTML5, CSS3, Javascript, and AWS Cloudfront resulting in \$700K hot leads for sales
- Spearheaded effort to increase frontend unit testing by integrating tests into our code review process that drove 800% increase in test count - allowing creation of new features without breaking older components
- Frontend tech lead for Amazon SES-backed bulk messaging service with Slack-inspired design that has served 50K+ messages, allowing college partners to communicate with subsets of students from a single interface

Veritas Technologies | Senior Web Developer | Santa Clara, CA

2017 - 2019

- Led React modernization initiative at Veritas, building SPAs with Node.js and AEM CMS while mentoring engineers on React patterns, significantly reducing page load times and accelerating team adoption

EDUCATION**B.S. Management**, *University of California, Merced*

2012

CERTIFICATES**N1**, Japanese-Language Proficiency Test 日本語能力試験

2022
